Setup the Facebook SDK for JavaScript
The following snippet of code will give the basic version of the SDK where the options are set to their most common defaults. You should insert it directly after the opening <body> tag on each page you want to load it:
<script>
window.fbAsyncInit = function() {
FB.init({
appId : '595611093910707',
xfbml : true,
version : 'v2.4'
});

1. Click on this
APIs
Credentials
API
You need credentials to access APIs. Enable the APIs you plan to use and then create the credentials they require. Depending on the API, you need an API key, a service account, or an OAuth 2.0 client ID. Refer to the API documentation for details.
Add credentials
2. Click on this
3. Click on this
API key
Identifies your project using a simple API key to check quota and access. For APIs like Google Translate.
OAuth 2.0 client ID
Requests user consent so your app can access the user's data. For APIs like Google Calendar.
Service account
Enables server-to-server, app-level authentication using robot accounts. For use with Google Cloud APIs.
